## LABORATORY REPORT

**Lab # and Title:**

**Date:**

**Name:**

**Lab Partners:**

**SUMMARY** (Required for all labs - 1 page maximum): Discuss the main conclusions/findings from the experiments or simulations, using the comments you recorded while doing the experiment. Address the concepts addressed in the tutorial lecture and experimental procedures. For example: how did theory and experiment agree or disagree? What results have been suggested by the data? What have you learned? Each conclusion should include some numbers that are taken from the data in your procedure. The TA should be able to correlate each summary with specific data in each student's procedure. This is not a summary of the procedures you followed; rather it is a summary of the results you achieved and the lessons that were learned.

**DISCUSSION OF RESULTS** (Not required for all labs): Here you can address specific questions or instructions required in a particular lab, and attach any plots and figures. This should not include any extended discussion, but should be well organized and labeled.
